No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                        The present sequence represents a protein of 166 amino acids. The sequence is disclosed as being a protein called BBC6 which regulates cell death through interaction with BC1-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or diagnostic procedures, as a molecular weight marker, and to raise antibodies that can be used in unspecified diagnostic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the human Bcl-xL/Bcl-2 associated death promoting polypeptide, Bad, the binding of which to Bcl-xI results in the induction of programmed cell death, i.e. apoptosis. Bad can be used in screening assays for compounds to treat or prevent diseases characterised by apoptotic cell death, such as neurodegenerative disorders, e.g. Alzheimer's and Parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa and cerebellar degeneration, and myelodysplastic syndromes, e.g. aplastic anaemia and ischaemic injury including myocardial infarction, stroke and reperfusion injury. Assays can also be used to obtain apoptosis enhancing compounds to treat or prevent diseases characterised by the loss of apoptotic cell death, such as cancers, e.g. lymphoma and hormone dependent tumours, autoimmune diseases, e.g. systemic lupus erythematosus and immune-mediated glomerulonephritis and viral infections, e.g. herpesvirus, poxvirus or adenovirus infection. Bad can also be used for

```
shares structural and chemical homology with Bol-2, is involved in cell proliferation. Its coding sequence was isolated by screening a synovial proliferation. Its coding sequence was isolated by screening a synovial alignments. The gene and protein can be used in the treatment of various cancers, disorders with associated inflammation such as Addison's atherness syndrome, allergies, ansemia, asthma, atherosolerosis, Crohn's disease, ulcrative colitis, disbetes mellitus, emphysema, glomerulonephritis, gout, Graves' disease, irritable bowel syndrome, lupus erythematosus, multiple sclerosis, myasthenia gravis, myocardial or pericardial inflammation, osteoporosis, rheumatoid arthritis, Sjogram's syndrome and autoimmune thyroiditis, complications of cancer, haemodialysis and extracoxporeal circulation, infections, trauma, disorders with associated apoptosis including AIDs and other infectious and genetic immunodeficiencies, neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease, ischeemic injuries
                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated or synthetic polypeptide (I) comprising a less than full length amino acid sequence of a mutant Bel-XL/Bel-2 associated cell death regulator polypeptide (BAD) or its fragment, which contains amino acid substitutions at Ser118 of a human BAD, Ser155 of a murine BAD (longer murine BAD) or Ser113 of a human BAD (serification acid substitutions at Ser113 of a murine BAD) antiarthe BAD). (I) has immunosuppressive activities, and contropic, antiinflammatory and immunosuppressive activities, and antiarthritic, antiinflammatory and immunosuppressive activities, and polypucial inducer or inhibitor. BAD polypeptides and polynucleotides can be used for screening candidate compounds and drugs for activity that promote cell survival or apoptosis. Other uses include indentified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischaemic cell death, reperfusion cell death, wound healing, cancer, viral infections, attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attinium and attin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     autoimmune diseases. The present sequence represents a specifically claimed human BAD mutant amino acid sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bcl-XL/Bcl-2 associated cell death regulator; BAD; mutant; apoptosis; mumuostimulant; neuroprotective; nootropic; antiischaemic; vulnerary; cytostatic; antiviral; antiarthritic; antiinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiancy disease; neurodegenerative disease; viral infection; isobaemic cell death; reperfusion cell death; arthritis; infection; lymphoproliferative condition; inflammation; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New mutant Bcl-XL/Bcl-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Serl18, Serl55 or Serl13
                                                                                                                                                                                                                                                                                                                                                                                                                                         Human BAD mutant amino acid sequence SEQ ID NO:1.

The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SKP1, SKP2), SKP2-like proteins (ZF) and CUL-1 (a member of the cullin/CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or Bcl-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modulating polypeptide levels in a cell, diagnosing and treating tumor, involves altering levels of proteins such as S-phase kinase associated proteins 1, 2 and cullin/CDC53 proteins -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method (MI) for inducing apoptosis in a cell infected with herpes simplex virus (HSV), which comprises administering to the cell, a composition having an agent that inhibits phosphorylation of pro-apoptoit oplypeptide BAD by HSV US3. Also described is a method (M2) for treating a patient infected with HSV, by administering to the patient, a composition comprising a peptide comprising a sequence of 4-100 continuous amino acids of a 166 residue amino acid sequence (see ABR39081), where the peptide comprises seril2, ser135, or ser155, or their combinations. BAD has virucide activity. MI is useful for inducing apoptosis in a cell infected with HSV, where the cell is in a human. M2 is useful for treating a patient infected with HSV with HSV. The present sequence represents human BAD, which is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human protein which is associated with cell proliferation, designated APOP-1. The specification also describes APOP-2 and APOP-2. The APOP polypeptides are useful for diagnosing, preventing or treating disorders associated with abnormal cell proliferation and apoptosis. The polypeptides and composition are particularly useful for treating or preventing cancer (e.g. brain or breast cancer), a disorder associated with an increase in apoptosis (e.g. Alzheimer's disease or Parkinson's disease) or inflammation (e.g. allergies, gout, osteoarthritis or bronchitis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptides associated with cell proliferation, useful for preventing or treating cancer (e.g. brain cancer), a disorder associated with an increase in apoptosis (e.g. Alzheimer's disease) or
brain cancer; breast cancer; Alzheimer's disease; Parkinson's disease; inflammation; allergy; gout; osteoarthritis; bronchitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

of the mitochondia of its fragment. (1) has virucide, neuroprotective, vasotropic and cytostatic activities, and can be used as a mitochondrial permeability transition proce complex (PPPC) modulator. (1) is useful for treating or preventing a pathological infection or disease. (1) is also useful for regulating cell death regulatory modecules, specifically the apoptogenic function of the PTPC, for treating e.g. cancer, isothaemia, neurodegenerative diseases, fulminant hepatitis or viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a chimeric bifunctional molecule (I) comprising at least a first functional molecule covalently linked to a second functional molecule, which is able to modulate the activity of the permeability transition pore complex (PPPC) of the mitochondria. (I) has the function of specifically targeting and entering a tissue celli population. The second functional molecule has the function of specifically targeting, and inducing or preventing the death of the cells by apoptosis by regulating the opening or the closing of the PPPC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a PTPC-interacting TOX peptide which is given in the exemplification of the present invention.
                                                                                                                                                                                                         apoptogenic; ischaemia; neurodegenerative disease; fulminant hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; Bcl2; BclXl; programmed cell death; apoptosis; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treating, prognosing or preventions our polypeptices in displaced.

Treating, prognosing or preventing various ovarian in displaced.

Glisorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system clisorders (e.g., infertility, disorders of pregnancy, anovulation.

Delyoystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infertings (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and variant cysts and disorders (e.g., congenital and acquired them to a spiration disorders (e.g., congenital and acquired disorders, authimmune Ophoritis, systemic lupus erythematosus), conditionates, authimmune cophoritis, systemic lupus erythematosus), conditionatory disorders (e.g., anomala), cardiovascular disorders and uninary system disorders (e.g., congenital polypeptides and conditionation of individuals and in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may be used to gene therapy, chromosome mapping, in the collection of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel mutant protein which is derived from a wild type human BC1-2 protein. The mutant is created by replacing a sequence of amino acid residues comprising a flexible loop from the wild type BC1-2 protein with an amino acid sequence comprising at least two acidic amino acids. The mutant BC1-2 protein comprises a 166 residue shown in the specification. The invention also comprises an assay for identifying substances that the BC1-2 protein. The protein sequences of the invention are useful in biological assays to identify substances that block the ability of BC1-2 to inhibit programmed cell death or apoptosis. The present sequence represents a human BC12 peptide of the invention.

The present invention relates to new peptides that are derived from a wild-type human Bad peptide and are able to bind to a member of the Bcl-2 protein family. The peptides are useful, when labelled, in competitive/displacement assays for identifying substances that bind to members of the Bcl-2 family and may induce or suppress apoptosis so are potentially useful for treating cancer (inducers) or degenerative diseases or ischemic injury (suppressors). The peptides of the invention have high helix propensity, maintain the contacts of the wild-type Bad peptide and, compared with the Bad peptide, may have better physical properties, particularly solubility. The present sequence represents one of a collection of Bad peptides (AAU78601-AAU78631) that were derived from the BH3 domain of the human wild-type Bad peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel mutant protein which is derived from a wild type human Bcl-2 protein. The mutant is created by replacing a sequence of amino acid residues comprising a flexible loop from the wild type Bcl-2 protein with an amino acid sequence comprising at least two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New mutant Bcl-2 proteins derived from a wild type human Bcl-2 protein, useful in biological assays to identify substances that block the ability of Bcl-2 to inhibit programmed cell death or apoptosis
                                                                 New derivatives of Bad peptide, useful for identifying compounds that bind to Bcl-2 proteins, potential agents for treating cancer and degenerative disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; Bcl2; BclXl; programmed cell death; apoptosis; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to new peptides that are derived from a wild-type human Bad peptide and are able to bind to a member of the Bcl-2 protein family. The peptides are useful, when labelled, in competitive/displacement assays for identifying substances that bind to potentially useful for treating anner (inducers) or degenerative diseases or ischemic injury (suppressors). The peptides of the invention have high helix propensity, maintain the contacts of the wild-type Bad peptide and, compared with the Bad peptide, may have better physical properties, particularly solubility. The present sequence represents one of a collection of Bad peptides (AAU78601-AAU78631) that were derived from the BH3 domain of the human wild-type Bad peptide.
acidic amino acids. The mutant Bcl-2 protein comprises a 166 residue shown in the specification. The invention also comprises an assay for identifying substances that bind to the Bcl-2 protein. The protein substances of the invention are useful in biological assays to identify substances that block the ability of Bcl-2 to inhibit programmed cell death or apoptosis. The present sequence represents a human Bcl2 peptide of the invention.

HANDER DE STANDER DE S

```
This invention relates to a novel mutant protein which is derived from a wild type human Bcl-2 protein. The mutant is created by replacing a sequence of amino acid residues comprising a flexible loop from the wild
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New mutant Bcl-2 proteins derived from a wild type human Bcl-2 protein, useful in biological assays to identify substances that block the ability of Bcl-2 to inhibit programmed cell death or apoptosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   type BC1-2 protein with an amino acid sequence comprising at least two acidic amino acids. The mutant BC1-2 protein comprises a 166 residue shown in the specification. The invention also comprises an assay for identifying substances that bind to the BC1-2 protein. The protein squences of the invention are useful in biological assays to identify substances that block the ability of BC1-2 to inhibit programmed cell death or apoptosis. The present sequence represents a human BC12
                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; Bcl2; BclX1; programmed cell death; apoptosis; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 25;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels

The mutant is created by replacing a sequence of amino acid residues comprising a flexible loop from the wild type Bcl-2 protein with an amino acid sequence comprising at least two acidic amino acids. The mutant Bcl-2 protein comprises a 166 residue shown in the specification. The invention also comprises a assay for identifying substances that third to the Bcl-2 protein. The protein sequences of the invention are useful in biological assays to identify substances that block the ability of Bcl-2 to inhibit programmed cell death or apoptosis. The present sequence represents a human Bcl2 peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                             New mutant BC1-2 proteins derived from a wild type human BC1-2 protein, useful in biological assays to identify substances that block the ability of BC1-2 to inhibit programmed cell death or apoptosis

Patent No. 6504022

GENEBAL INFORMATION:
APPLICANT: Horne, William A.
APPLICANT: Oltersdorf, Tilman

TITLE OF INVENTION: HOMAN BAD POLYPEPTIDES, ENCODING NUCLEIC
TITLE OF INVENTION: ACIDS AND METHODS OF USE
FILE REPERENCE: 480140,428nl
CURRENT APPLICATION NUMBER: US/09/375,257

CURRENT PILING DATE: 1999-08-16

NUMBER OF SEQ ID NOS: 15

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 3

LENGTH: 204
                                                                                                                                                                                         ö

SIMILARITY: BELCHORS TO THE BCL-2 FAMILY.
CAUTION: Ref. 1 sequence differs from that shown due to frameshifts in position 64 and 91.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               receptor signaling and the apoptotic pathways.
SUBDNIT: Rorms heterodimers with the anti-apoptotic proteins, Bcl-
x(1), Bcl-2 and Bcl-w. Also binds protein $100A10 (By similarity).
The Ser-75/Ser-99 phosphorylated form binds 14-3-3 proteins (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     phosphorylation, locates to the cytoplasm.
TISSUE SPECITICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES.
DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.
PTM: Phosphorylated on Ser-75 in response to survival stimuli. Subsequent phosphorylation on Ser-99 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-118, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival. Ser-99 is the major site of ART/PKRB phosphorylation, Ser-118 the major site of protein kinase A (CAPK) phosphorylation (by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -I- FUNCTION: Promotes cell death. Successfully competes for the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimentation of these proteins with BAX. Can reverse the death repressor activity of Bcl-x(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor
                                                                                                                                                                                                                                                                                                                                                  Petros A.M., Nettesheim D.G., Wang Y., Olejniczak E.T., Meadows R.P.,

their interaction with Bcl-w in sympathetic neurons.";

Mol. Cell. Neurosci. 17:97-106(2001).

-: FUNCTION: Promotes cell death. Successfully competes for the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl-x(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor receptor signaling and the apoptotic pathways.

-: Subunit; Porms heterodimers with the anti-apoptotic proteins, Bcl-x(L), Bcl-2 and Bcl-w. Also binds protein SlOAAIO. The Ser-113/Ser-137 phosphorylated form binds 14-3-3 proteins.

-: SubcEllUlaria IcORFINON: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           bowaln form.

DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX thair pro-apoptoric activity and for their interaction with anti-apoptoric members of the Bcl-2 family.

PTM: Phosphorylated on Ser-113 in response to survival stimuli. Subsequent phosphorylation on Ser-137 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-156, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival. Ser-137 is the major site of AKFNER phosphorylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IsoId=035147-2; Sequence=VSP_000534; risous specification: Expressed in all tissues tested, including brain, liver, spleen and heart. In the brain, restricted to epithelial colls of the choroid plexus, Isoform alpha is the more abundant form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S->A: NO HETERODIMERIZATION WITH 14-3-3 PROTEINS. Hirasawa T., Roy P.;

"The complete nucleotide sequence of VP5 of a strain of bluetongue virus of serotype 1 isolated in the USA reveals its close relationship with a virus of serotype 1 isolated in Australia.";

Virus Res. 15:107-112(1990).

-: FUNCTION: THE VP5 PROTEIN IS ONE OF THE TWO PROTEINS (WITH VP2)

WHICH CONSTITUTE THE VIRUS PARTICLE OUTER CAPSID.

-: SIMILARITY: BELONGS TO THE REOVINGESS VP5 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0;

-!- CAPALYTIC ACTIVITY: ATP + L-methionine + tRNA(Met) = AMP + diphosphate + L-methionyl-tRNA(Met).
-!- COPACTOR: Binds 1 zinc ion per subunit (By similarity).
-!- SUBUNIT: Homodimer (By similarity).
